

# Chomsky BINGO!

---

This BINGO card is valid for the entire duration of Chomsky's stay at the University of Arizona. First one to get BINGO wins...idk what, it's just a game. If you actually yell out "BINGO!" during one of his talks maybe I actually will get you something.

irrelevant political aside (bonus points for Trump)	"structural distance" wins over "linear distance"	"allow one's self to be puzzled"	"the dogma that language is for communication"	Can eagles that fly swim?
steam rises and rocks fall to their "natural place"	"language 'grows' or 'maturates' in the mind"	extolling the virtues of ignoring data	EPP is "well established empirical fact" (cue laugh track)	black people vs. orangutans anecdote
That sweater? Even in Arizona?	construing some new idea he has as being consensus	Characteristic hand-movements ( <b>FREE</b> )	corpus linguistics as "butterfly-collecting"	comparing computational linguistics to behaviorism
some unfounded claim is "conceptually true"	speculations about a "Martian scientist"	Behaviorism like a "science of meter-reading"	"Galileo's demolition of the mechanistic world"	name-dropping Descartes with questionable relevance
kittens and rocks	miss the point of a question (basically a free space)	dismissing a whole field/framework as "not serious"	(repeating anything on this card more than once)	reference to Port Royal grammar
